

Customer success story

Challenges

CUA utilises several Citrix technologies to deliver critical services to its customers, staff and business partners. Citrix NetScaler has long been CUA's Application Delivery Controller (ADC) of choice, with CUA previously deploying a platform of SDX appliances which delivered a flexible and scalable on premises solution.

- With the original SDX hardware platform reaching end of life and CUA's vision towards further flexibility (including the adoption of public cloud), a new method of delivering ADC services was required.

Credit Union Australia

About

CUA is a credit union based in Brisbane, Australia. With over 50 branches nationally, they are the country's largest member based credit union. Offering financial and insurance products and services to over 500,000 Australians.

"oobe did a great job making sure the solution chosen was the best option available for the longer term and implemented it under extremely short timelines"

Solution

<p>oobe worked with CUA and Citrix to determine the various options that were available, with a specific focus on strategic technology objectives as well as total cost of ownership.</p>	<p>Based on these objectives and the options presented, a virtual (VPX) pooled licensing model was selected.</p>	<p>oobe provided project management services to assist, plan and execute the migration.</p>
	<p>oobe provided a fixed price engagement for the deployment of, and migration to, the new solution.</p>	<p>The project was delivered on time and within budget.</p>

The new product and licensing model provided CUA with the ultimate flexibility to scale and adapt to future business needs.

Scaling out the new capability and adopting additional ADC services in future will not be tied to a vendor supplied hardware platform that has a hard expiration date.

The subscription based pooled licensing model provides additional commercial benefits, allowing flexible and incremental pay as you grow licensing.
